# Monitor   Manage   **MAXIMIZE**

EkkoSense

Software Driven Data Centre Optimisation

With its powerful mix of optimisation and cooling analytics capabilities, EkkoSense®
is uniquely positioned to help you maximize your data centre performance

Zone-by-Zone Cooling Analytics -
with EkkoAir, EkkoSoft® Critical
is able to map the cooling zones
of influence active within any
data centre environment to help
with resiliency and capacity
planning decisions

**Continuous Thermal
Optimisation** - EkkoSoft®
Critical's advisory functionality
clearly identifies data centre
floor tiles or grilles that need
changing, recommends
immediate adjustments to set
points and also highlights and
suspends CRAHs that aren't
actively cooling

Autonomous Cooling Optimisation
- EkkoSense® beta customers
already benefit from fully
autonomous cooling as part of an
ongoing continuous optimisation
strategy. EkkoSoft® Critical links
to cooling units across the data
centre estate - maintaining
optimal cooling configurations
via automated controls

Energy Saving, Risk Reduction and Capacity Release

Cooling Energy Savings of up to 30%, thermal compliance to ASHRAE standards and capacity release by utlilising assets more effectively

Experts in Cooling Energy Savings - EkkoSense® has 25+ years of experience working within data centre and telco environments to resolve complex airflow and thermal issues for our customers

Thermal and Airflow Tracking Before, During and After - EkkoSoft® allows a managed approached to any optimisation programme, providing clear tracking through the process

Proven Energy Savings - EkkoSense's unique optimisation programme has enabled customers to achieve significant cooling energy savings (24% on average)

EkkoSense is a leading provider of SaaS-based, DCIM-class software platforms and unique sensors for managing and optimising critical data centre environments. The platform delivers proven cooling energy saving, risk reduction and capacity release benefits to any data centre operator.
