

MONITOR Manage Maximize

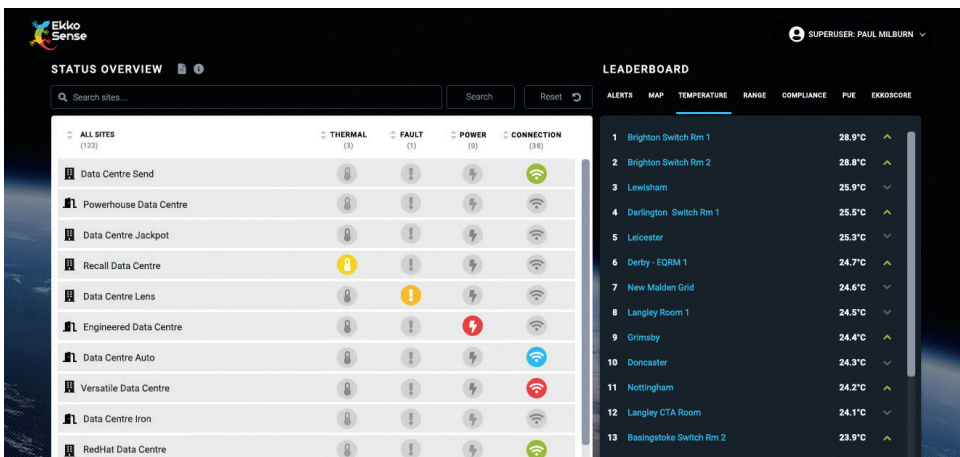

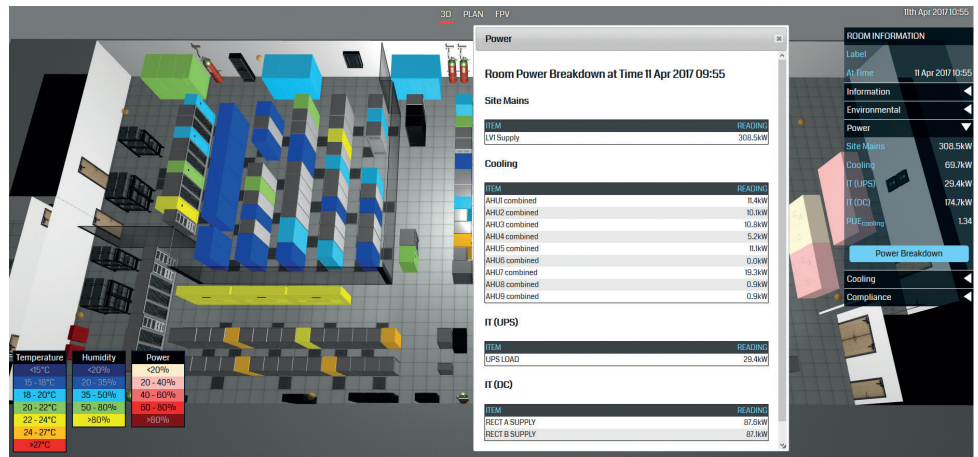

Immersive Real-Time Thermal and Power Monitoring

EkkoSoft® Critical combines the latest visualisation techniques and wireless sensor inputs to provide data centre teams with the industry's first 3D real-time view of their critical heartbeat operational data.

Thermal Compliance Monitoring – monitor and report on thermal and cooling data down to rack, CRAH and grille level

Power Monitoring – track AC & DC power from switchboard, UPS, rectifier and distribution-board level down to individual rack level

Estate View – Monitor across multiple rooms and sites and manage operational performance with clear leaderboards and trending

MONITOR Manage Maximize

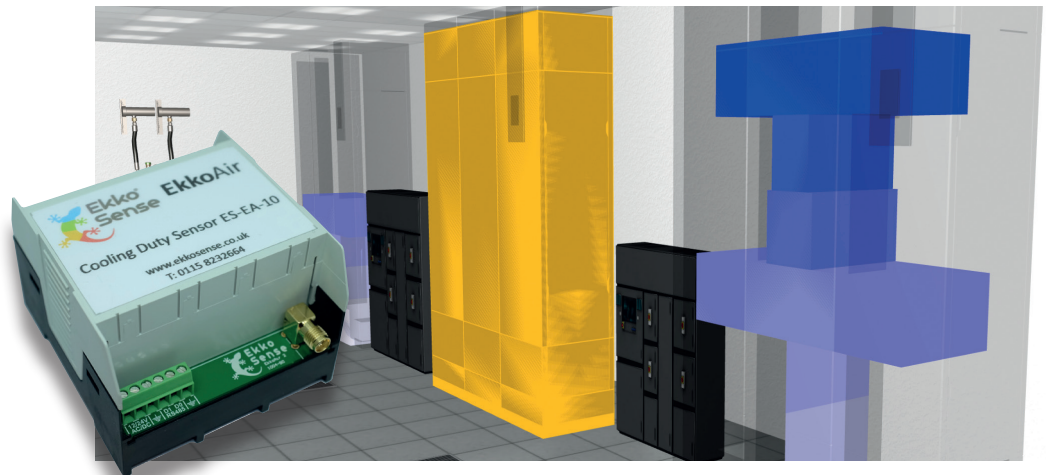

Unique Sensor Technologies for Data Centre Optimisation

The Critical Things® family of sensors and integration tools disrupts the traditional monitoring cost model to make the real-time thermal management of data centres a reality.

Wireless Sensors – low-cost IoT-enabled sensors support your transition towards a ‘fully-sensed’ data centre environment

EkkoAir – unique vendor agnostic sensor to provide real-time airflow and kWc cooling duty, providing alerts on significant performance changes

Integration - Ekkosense offer a wide range of integration and secure data transport to the cloud including Modbus, SNMP, Obix, RestAPI and BACnet as well as support for 3rd party sensors

EkkoSense is a leading provider of SaaS-based, DCIM-class software platforms and unique sensors for managing and optimising critical data centre environments. The platform delivers proven cooling energy saving, risk reduction and capacity release benefits to any data centre operator.
